Dear Mr. McDonald

This is to thank you for the very fine presentations made to our Value Engineering Course by your Messrs. John Gracely, Harley West, and Herbert Longfellow on 3 April 1963. In my opinion this was one of the best company team efforts to date. Each individual is to be commended for his demonstrated knowledge of the topic, the manner in which he presented it, and his effective handling of student questions.

A part of the presentation which impressed me particularly was the handling of the "hardware problem." This is currently partially covered in your publication which, it is understood, currently is undergoing revision. When the up-to-date version of this booklet is available, it would be appreciated if a copy could be made available to me for my personal use. While the "hardware problem" was being presented, the thought came to mind that this might prove a valuable addition to our offerings next fiscal year, if you people would be open to multiple participation. Additionally, if the booklet with the problem could be available in our library and loaned to each student for advanced study, possibly even more benefit could be derived. Your thinking in this matter would be appreciated.

In the meantime, thank you again for your interest and a job well done.

Sincerely,

  
Arthur D. Even
