Messrs. L. D. Miles  
F. D. Nicol  
Room 165 - Bldg. #2

Thank you very much for the second presentation on Value Analysis to the second year class of the Creative Engineering Program.

The comparison of machine speeds and cost per piece produced, as presented by Mr. Nichols, was very interesting and served to answer many questions the members of the class have asked in the past.

The other material, such as the comparison of the compressor parts and the Telechron motor pinion, presented by Mr. Miles, proved the purpose of Value Analysis and illustrated that a thorough analysis can result in a saving.

I am quite certain you will be approached again next year for a similar presentation.
